

Triangle Offers Scholarship in Partnership with Bergen Community College

Triangle Manufacturing Company, Inc. continues its partnership with the Bergen Community College (BCC) Manufacturing Technology Program through the establishment of a scholarship.

The scholarship will be offered to a qualified applicant who has been accepted to the BCC Manufacturing Technology program. The two-year, 62 credit Manufacturing Technology curriculum is designed to teach students machine tool principles, computer aided drafting, CNC programming and process improvement among other subjects.

Triangle has gained four full-time associates as a result of the co-op requirement to the program. The students start in a trainee program to develop their skills and are usually promoted into CNC operator positions within a year.

“At Triangle, these students have an opportunity to combine their education with real-time experience,” notes Ann McGinley of Triangle. “The students gain exposure to more aspects of the business with a smaller company like Triangle,” she added, noting that Triangle relies on the cross functionality and flexibility of its associates.
